Cumulative Index

Subject Index: Volume 13 1979

Astronomy
Hawaii's Mauna Kea: a Paradise for IR Astronomers; Vol. 13, Issue 10, p.30.

Aureole
Boom Babies Lead to "Electronic Eighties"; Vol. 13, Issue 3, p.8.
Frustrating Electronic Spies; Vol. 13, Issue 5, p.8.
Gift from the Scientific Community, A; Vol. 13, Issue 1, p.8.
How to Succeed in (Simulated) Business; Vol. 13, Issue 6, p.8.
Introducing the Multilingual Machine; Vol. 13, Issue 7, p.8.
Largest Scientific Experiment, The; Vol. 13, Issue 4, p.8.
No Cold Potatoes in Space; Vol. 13, Issue 2, p.8.
Solar Powered Flight; Vol. 13, Issue 11, p.8.
Striking a Blow for R&D; Vol. 13, Issue 10, p.8.
Summer on the Rocks; Vol. 13, Issue 8, p.8.
Uncomplaining Worker, An; Vol. 13, Issue 12, p.8.

Coatings
Balzers' Inveterate Beeline to U.S. Markets; Vol. 13, Issue 9, p. 58.
Filters; Vol. 13, Issue 1, p. 41.
Measuring Coating Thickness: the Optical Approach; Vol. 13, Issue 2, p.41.
Multilayer Thin Film Program for the TI-59 Calculators; F.J. Klein; Vol. 13, Issue 7, p.79.
Putting AR Coatings to Plastic; G.K. Kienel and B. Heinz; Vol. 13, Issue 5, p.43.
Vacuum About-Face for Upcoming Coatings, A; Fred Praudisch; Vol. 13, Issue 9, p.36.
Vital Contrast in the Display World; Gary S. Ash; Vol. 13, Issue 9, p.45.

Color
How Many Colors?; Homer B. Tilton; Vol. 13, Issue 2, p.32.

Detectors
Comeback: Microchannel Intensified Array Detectors, The; Don Osten; Vol. 13, Issue 10, p.58.
Designing for the Fastest Response Ever; Lawrence A. Godfrey; Vol. 13, Issue 10, p.43.
Detectors; Vol. 13, Issue 1, p.26.
HgCdTe: Number One in Night Vision; Dr. Robert Martineau, Gene Robillard and Theodore Wong; Vol. 13, Issue 7, p.45.
How Imaging Measures up at Low Levels; Jonathan L. Weber and Paul W. Roehrenbeck; Vol. 13, Issue 3, p.58.
Photometric Response Sensors: Fact or Fiction?; Paul H. Wendland and Dennis Horwitz; Vol. 13, Issue 12, p.50.

Display
Displays; Vol. 13, Issue 1, p.31.
Vital Contrast in the Display World; Gary S. Ash; Vol. 13, Issue 9, p.45.

Editorials
Apollo Ten Years Later; Vol. 13, Issue 7, p.6.
Back to the Drawing Board; Vol. 13, Issue 2, p.6.
Campus and the Military, The; Vol. 13, Issue 3, p.6.
China: Awakening Giant; Vol. 13, Issue 11, p.6.
Economics of R&D, The; Vol. 13, Issue 9, p.6.
Lessons of Three Mile Island; Vol. 13, Issue 5, p.6.
Rendering Unto Caesar; Vol. 13, Issue 1, p.6.
Saving the Spirit of Innovation; Vol. 13, Issue 12, p.6.
Sharing the Instrumentation Costs; Vol. 13, Issue 8, p.6.
State of School Science, The; Vol. 13, Issue 10, p.6.
Tightening the R&D Belt; Vol. 13, Issue 4, p.6.
Unshackling the Innovator; Vol. 13, Issue 6, p.6.

Energy
Energy; Vol. 13, Issue 7, p.28.
Energy Overview; Vol. 3, Issue 7, p.61.
Following Foreign Fusion: the View from Three Countries; Vol. 13, Issue 5, p.30.
Laser Fusion and the Energy Challenge; Vol. 13, Issue 11, p.29.
Lessons of Three Mile Island; Vol. 13, Issue 5, p.6.
Nuclear Issue, The; Vol. 13, Issue 9, p.65.
Solar-Powered Phoning Eliminates Cable Need; Vol. 13, Issue 6, p.41.

Fiber Optics and Communications
Air Force Radar Link Uses Optical Fibers; Vol. 13, Issue 3, p.38.
Belgian Link Aids Product Testing; Vol. 13, Issue 9, p.49.
Consumer's Guide to Laser Diodes, A; C.J. Hwang and C.S. Wang; Vol. 13, Issue 6, p.56.
Fast Pulses Through Optical Fibers: Bell Probes Picoseconds; Vol. 13, Issue 4, p.28.
Fiber Optics; Vol. 13, Issue 1, p.34.
Fiber CATV Link Sets New Record; Vol. 13, Issue 5, p.45.
Fiber Optic Link for Cable Watchers; Vol. 13, Issue 8, p.35.
Growing Fiber Industry Meets in Chicago, A; Vol. 13, Issue 10, p. 47.
Industry Gears Up for Free-Space Communications; C. Emery Powell; Vol. 13, Issue 6, p.60, and Issue 7, p.56.
Inside the New Region: Second-Generation Fiber Systems; D. Gloge; Vol. 13, Issue 11, p.50.
ITT Keeps the Fiber Ball Rolling for the Navy; Vol. 13, Issue 1, p.47.
Politics of "One-Wire", The; Vol. 13, Issue 11, p.33.
Quality Check for Fiber End Faces, A; Paul R. Reitz; Vol. 13, Issue 12, p.39.
Solar-Powered Phoning Eliminates Cable Need; Vol. 13, Issue 6, p.41.
Sorting News from Earth-Resources Satellites; Richard P. Kenan, Carl M. Verber and David W. Vahey; Vol. 13, Issue 12, p.46.
Telecommunications Revolution—Canada Plays to Win; Vol. 13, Issue 7, p.33.
Washington Meeting Marks Fiber Communications Progress; Vol. 13, Issue 4, p.33.

Holography
Analysis; Vol. 13, Issue 1, p.40.
Optical Coherence: Self-Perpetuating Science; Anthony J. Devaney; Vol. 13, Issue 10, p.41.

Imaging
Architectural Breakthroughs in Digital Image Processing; Harry C. Andrews; Vol. 13, Issue 12, p.55.
Evaluating the Lithocon Image Memory; Thomas K. Gaylord and Clark C. Guest; Vol. 13, Issue 6, p.81.
How Imaging Measures Up at Low Levels; Jonathan L. Weber and Paul W. Roehrenbeck; Vol. 13, Issue 3, p.58.
Imaging; Vol. 13, Issue 1, p.42.

Integrated Optics
Guided Waves at 10.6 Micrometers; Elsa Garmire; Vol. 13, Issue 4, p.50.
Optical Detective for Military Forces, An; Vol. 13, Issue 9, p.30.
Sorting News from Earth-Resources Satellites; Richard P. Kenan, Carl M. Verber and David W. Vahey; Vol. 13, Issue 12, p.46.

Laser Accessories
Laser Polarizers: the Calcite Role; Joseph P. Machewirth; Vol. 13, Issue 12, p.59.

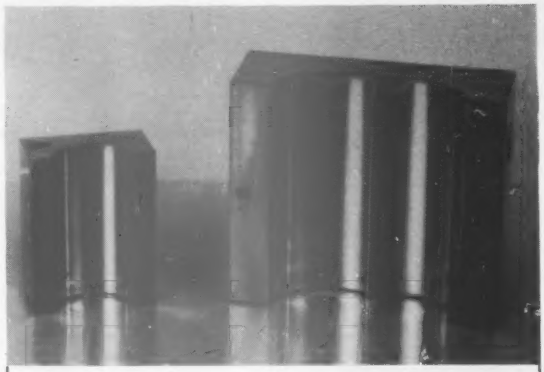
Vacuum Systems; Vol. 13, Issue 1, p.46.



LASER GOLD
AND OTHER
CURIOUS DEFINITIONS

LASER GOLD (lā 'zar gōld) n. 1. A hard, (meaning it can be cleaned), ultra-high infrared reflective gold coating that is applied to metal substrates such as our Optical Electroless Nickel (see below). 2. An exclusive electroplating process that was originally developed by Cohan Epner as an abrasion resistant thermal reflector surface for Xerox. This unique gold on pump cavity surfaces can actually boost the output of a Nd:YAG laser by as much as 30%.

Laser Gold has a reflectivity that exceeds 97 1/2% at 1.15 microns and bumps 99% at 10. AND is still cleanable!!! It can also be applied **thin** enough not to disturb the figure of a mirror or **thick** enough that a diffraction grating can be cut into the gold layer.

OPTICAL QUALITY ELECTROLESS NICKEL (nik 'l) n. 1. A unique ternery-metal alloy that diamond turns or optically polishes better than any nickel coated surface you've ever tried! If you don't agree, your mirror is free. Never a pit... never a pinhole...just a beautiful amorphous layer of nickel alloy. It actually has been polished to 10-2 scratchdig quality!

LASER SILVER (lā 'zr sil 'vur) n. 1. An electrodeposited silver coating early samples of which are extremely promising at 150-200 microsecond pulse width. It has shown a dramatic ability to resist corrosion and tarnish and is available with certain caveats, on an experimental, "share the data" basis.

COHAN EPNER (kō 'han ep 'nur) 1. The name of a New York plating firm that prefers to be known as an "optical coatings house that uses **plating**." A bit snobbish perhaps, but somehow we feel we have little in common with the more traditional platers who will occasionally plate a part for optical function, often using the same facility that may have plated motorcycle parts. 2. The company that developed and actually supplies the LASER GOLD, LASER SILVER and OPTICAL ELECTROLESS NICKEL service on your substrates. 3. The name of the precious metal plating firm that was founded 70 years ago and was recently reorganized to concentrate its technology and research in plating for the laser and optical industries. Cohan Epner is single source on the TOW missile IR reflector for Hughes, IRCM components for Sanders, the sole United States supplier to Xerox on production copier reflectors and the sole cavity coating supplier to most of the top quality Nd:YAG laser manufacturers. Please call David Epner for a more complete discussion of our capabilities (212) 782-5948.

Not all Rodenstock products get engraved.

They are found within systems from simple illumination optics to complex mirrors, prisms, polygons, corner cubes, aspherics, domes, windows and many more.

We put the same amount of integrity into every optical element we supply, as the lenses that made our name a legend.

WEBER CLEAN ROOMS & CLEAN AIR MODULES

...we fight dirty

Dirty air, contamination, dust, and bacteria are some of the things we fight in this dirty world. And we win. In all types of aerospace, medical, electronic, drug, food, materials processing, testing, and general production applications.

We fight dirty with: Vertical flow ceiling diffuser systems. Wall and ceiling modular systems. Horizontal and vertical laminar flow process isolators. Work area systems. And work station units. All offer you class 100 protection (less than 100 particles 0.5 microns or larger per cubic foot) and the best possible combination of flexible modular construction and optimum control.

Because we have provided more square feet of clean space than anyone else in the business, we're the people who can help you solve any problem involving air which must be clean as well as sterile.

Call or write for more information and our newest brochure.

Our record is clean.
